Creative CNC to Highlight Mold Capabilities of ZW3D at Amerimold 2017

Creative CNC LLC will highlight the practical, flexible modeling and CNC functionalities of ZW3D software at Amerimold 2017 June 14 thru 15, 2017 at Donald E. Stephens Convention Center in Rosemont, IL. . Of particular interest to the mold industry are: Mold Automation, Flexible Sheet Metal and an enhanced Translator.

ZW3D is an affordable, all-in-one, integrated CAD/CAM software offering whole process 3D mold design, saving users time and money allowing engineers to move from concept to finished product in one easy to use, single, collaborative environment. Whole process 3D mold design takes engineers from the product to parting design, runner, cooling, slider and gate design, mold base, standard parts (such as: screw, ejector pin, guide), electrode and BOM. ZW3D Hybrid modeling technology allows designers to work directly on open geometry.

The translator easily reads PMI data and hidden entities generated by popular 3D software including CATIA V5/V6R2016 and SolidWorks 2016.

The intuitive parameter control in the Sheet Metal module provides a flexible, efficient operating experience. Newly added editing tools like flange and fold by line accelerate the design process. An updated dynamic section view reveals the internal structure of the design interactively, delivering a better user experience for both internal and external design. The value-added Equation Manager gathers variables and equation sets into one form allowing designers to quickly create, manage and retrieve them.

Visit us in Booth 608 to learn more about ZW3D software features. Creative CNC offers product training, implementation and support.

If you're unable to attend the show or interested in obtaining additional information about ZW3D or our company, please feel free to contact us.

Creative CNC LLC, located in Hartland, WI, specializing in innovative 5-axis machining solutions including time studies, programming, first article production and turnkeys. Our machining expertise includes impellers, molds, blisks and difficult to machine 5-axis parts. We're a VAR for ZW3D software and sell IMS Post software as well as iMachining for NX. In addition, we sell difficult to find, high performance European lubricants. Our passion for manufacturing and dedication to implementing creative, effective solutions, solidifies our status as a prominent business partner.

ZWSOFT (ZW3D Parent Company) recently celebrated its 30th anniversary, has over 550,000 clients in 80 countries. The CAD/CAM software provider has three R&D centers including one in Melbourne, Florida USA.
